

NEW TEXTURED DASH PANEL WITH BACKLIGHTING

CLIENT: SEAFOX

INDUSTRY: MARINE

PROCESS: TEXTURED PATTERN - BACKLIGHTING

SOLUTION: DASH PANEL - BACKLIGHTING

OBJECTIVE

Develop a new dash panel to enhance current design elements and add quality appeal.

CHALLENGE

The new design had to be cost effective, yet evoke a sense of luxury. It had to work well with backlighting and accommodate the instrument cluster, gauges and switches.

SOLUTION

By matching the boat's color scheme and adding a texture that imitated the triangle shape in the Sea Fox logo, we created a dash panel with instant visual appeal. The use of clear polycarbonate allowed us to accommodate the backlight feature and control thickness of the panel to easily accept switches and harnesses. With no requirement for extra machining, we controlled costs even further.

Through expertise and the utilization of the right material for the project, BCH Image developed a dash panel that brought added value and an improved appearance to the console area of the boat.
